The sequence was determined from 3 overlapping clones isolated from a human placented genomic library using a human Fit-1 5' cDNA fragment as probe. Also claimed are: an expression vector comprising the nucleic acid molecule; a host cell transformed with the vector; and a transgenic or chimeric animal containing the vector. The promoter can be used to provide endothelial cell specific gene expression, and control angiogenesis, e.g. innibition of tumour angiogenesis. The host cell can be used to screen for compounds that regulate the activity of a VEGF receptor promoter or

LOCUS ALS40382 B67 bp mRNA linear EST 16-FEB-2001 DEFINITIN ALS40382 LII_FL002_PL1 Homo sapiens cDNA clone CS0DE001KK21 5 prime, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anotes Vector: pcwsporr 6, site_1: Not1, 1st strand cDNA was primed with a Not1-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not 1 and cloned into the Not 1 and Eco RV sites of the pcWsPoR1 evector. Library was normalized. Library was constructed by Life Technologies, Contact : Feng Liang Life Technologies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 5, Application US/08252517
Patent No. 5548065
GENERAL INFORMATION:
APPLICANT: Lemischka, Thor R.
ATILE OF INVENTION: TOTIPOTENT HEMATOPOLETIC STEM CELL.
ITILE OF INVENTION: RECEPTORS AND THEIR LIGANDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDIUM TYPE: Floppy disk

The invention relates to novel sequence and polymorphisms in the human filt-1 gene. Filt-1 is one of the two receptors for vascular endothelial growth factor (VEGRel). The invention also relates to a method for diagnosing one or more single uncleotide polymorphism (SNP) in human filt-1 gene. The method is useful for assessing the predisposition and/or susceptibility of an individual to diseases mediated by an filt-1 ligand, to recognise individuals who are particularly at risk from developing these conditions, and in the development of new drug therapies that confirming are used in the diagnosis and treatment of the filt-1 gene. Filt-1 polymorphisms are used in the diagnosis and treatment of cancer and anglogenic diseases such as diabetic retinopathies, psoriasis, rheumatoid arthritis and endometriosis. Polymorphisms are also used in mapping the human genome and to elucidate the genetic component of the diseases, as genetic markers for this region in linkage studies. The nucleic acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful as components in databases useful in sequence identity, genome mapping, pharmacogenetics and other search analyses. The flr-1 antagonist is useful in the preparation of a medicament for treating VEGF-mediated diseases in a human diagnosed as having a single nucleotide polymorphism at one or more of the defined positions. The present sequence is human flt-1 gene DNA fragment related to the invention. This DNA fragment

The invention relates to a method for inhibiting expression of a target gene (ABE)1566-ABE(31797) in a cell by introducing at least one oligoribonuclectide that has a double-stranded structure consisting of at most 49 sequential incleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded sequence of 1-4 n. The method provides oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating timours but the oligoribonucleotides may also be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against cytokine, id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases stability and thus intracellular concentration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  38.0%; Score 114.4; DB 24; Length 4017; 99.1%; Pred. The invention relates to a method for inhibiting expression of a target gene (ABL91658-ABL9197) in a cell by introducing at least one oligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides
                                                          Human; HIV; HCV; gene expression; oligoribonucleotide; tumour; pathogen; Plasmodium; virus; viroid; cytokine; prion; antisense oligonucleotide; cytostatic; virucide; protozoacide; antibacterial; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         oligoribonucleotides for antisense inhibition of gene expression useful e.g. for treating tumours but the oligoribonucleotides may also be directed against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3194 CIGGCCICCCITIGAAAIGGAFGCCCCCAGAAACAATTTTGACAGAGIGIACACAATCC 3253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     69 CTCGACTTCCTCTGAATGGATGGCTCCTGAATCTATCTTTGACAAAAICTACAGCACCA 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Inhibiting gene expression in cells, useful for e.g. treating tumors, by introducing double-stranded complementary oligoRNA having unpaired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cytokine, id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known oligonucleotides, probably because the unpaired overhang increases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Receptor tyrosine kinase; vascular endothelial cell growth factors; cancer; tumour; diagnosing; monitoring; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (1) and polypeptide (1) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (1) is useful in gene therapy techniques (11). (11) is useful for genesting antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diagnostics, foremsics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3482 CCAAGAGCGACGTGTGTTACGGAGTATTGCTGTGGGAAATCTICTCCTIAGGT 3537

This nucleotide sequence encodes a novel receptor tyrosine kinase, termed KDR (see AAM80997), that is expressed on human endothelial cells. KDR is activated by vascular endothelial growth factor and caliates a mitogenic signal. It is implicated in clinical necangiogenesis. KDR cDNA was isolated from a human umbilical vein endothelial cell lambda phage CDNA library using a 576-pp DNA probe trait had been generated by PCR (see also AAV9980-53). The predicted protein product has amino acid differences from the previously published KDR sequence at positions 498 (Ala to Glu), 772 (Thr to Ala), 787 (dly to Arg), 835 (Asn to Lys), 848 (dlu to Val) and 1347 (Thr to Ser), producing a protein predicted by computer modeling to have higher activity and functionality. The invention also relates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3134 CICGCCTCTTGAAAIGGAIGGCCCCAGAAACAATTTTTGACACAGIGIACACAAICC 3253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       65 CTCGACTICCTCTGAAATGGATGGCTCCTGAATCTATCTTTGACAAAATCTACAGCACCA 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fragment encoding human KDR, a DNA fragment encoding the intracellular portion of KDR with or without a membrane anchor sequence, purified forms of associated human KDR, and human mutant forms of KDR. KDR, tusion proteins or fragments can be used in assays to identify antagonists and agonists of human KDR (claimed). Antagonists of KDR useful for treating diseases involving neonglogenesis e.g. diabetic retinal vascularization, cancers (e.g. brain, breast, etc.) and forms of inflammation e.g. rheumatoid artificials, psoriasis, contact dermatities and hypersensisitivity
                                                                                                                                                                                                                                                                                                                                                                                         Human receptor tyrosine kinase protein, KDR - useful e.g. to screen for antagonists useful to treat diseases involving necanglogenesis e.g. diabetic retinal vascularization, cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antayonists/agonists and for gene therapy (e.g. by introducing a gene portion encoding a KDR protein containing functional ligand blading and membrane anchoring moieties but not tyrosine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3254 AGAGTGACGTCTGGTCTITIGGTGTTTGCTGTGGGAAATATITTCCTTAGGT 3306

A labelled EcoRI-BamHI DNA segment derived from clone BTIII081.8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3194 CTGGCCTCCCTTTGAAATGGATGGCCCCAGAAACAATTTTTGACAGAGTGTACACAATCC 3253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             69 CYCGACTYCCTCTGAAATGGATGGCTCCTGAATCTATCTTTGACAAAATCTACAGCACCA 128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Was used as a probe to rescreen a human endothelial cond library (HI10246) for 5'full length DNA segments of the gene from which the insert portion of BTIII081 B is derived. A synthetic probe designed from nucleotides 3297-3325 of BTII0818 Is then used to isolate more 3' full length clones. One of the clones, designated BTIII200.2 is cloned into pBUBLescript Ks and the synthetic oligonucleotide 105ACGCGCG ATG GA cloned, which contains the initial sequence Metility the first two amino acids encoded by the KDR gene, forming was sequenced, together with BTII1081.8, and BTIII129 to comprise the entire ORP of 4,068 nucleotides of the KDR gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mitogen; necangiogenesis; angiogenesis; diabetic retinopathy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to determining whether a compound is capable of binding to a receptor protein complex comprising a vascular endothelial growth factor receptor? (VEGFR-2) receptor protein and a neuropilin-1 (NP-1) receptor protein. One method comprises introducing a sample comprising the compound to the receptor protein and allowing the compound to bind to the complex. Signaling through VEGFR-2 is enhanced in the presence of the NP-1 co-receptor. The methods of the invention can be used for identifying novel pro- and anti-anglogenic compounds. The present sequence represents the DNA encoding a human VEGFR-2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3263 CTCGCCTCCCTTTGAAATGGATGGCCCCAGAAACAATTTTTGACAGAGTGTACACAATCC 3322

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ă
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         D.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for inhibiting expression of a target capene (ABL91658-ABL91797) in a cell by introducing at least one consisting of at coligoribonucleotide that has a double-stranded structure consisting of at most 49 sequential nucleotide pairs, with at least part of one strand complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides

CC complementary with the target gene and has at least one end a single-stranded segment of 1-4 nt. The method provides

CC digoribonucleotides for attisense inhibition of gene expression useful

CC of intercating tumours but the oligoribonucleotides may also be conference against genes present in pathogens (e.g. Plasmodium or viruses/viroids, pathogenic on humans, animals or plants) or against contoxine, Id, developmental or prion genes. The method provides more effective inhibition of gene expression than use of known coligonucleotides, probably because the unpaired overhang increases tability and thus intracellular concentration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes murine foetal liver kinase I (flk-1), a protein tyrosine kinase. Isolated antibodies, pref. monoclonal, raised against the extracellular portion of flk-1 can be used to assay for ilk receptors on the surface of haematopoletic stem cells, and to isolate positive cells. The antibodies can also be used as, or to obtain ligands, which stimulate the proliferation and/or differentiation of stem cells. The ligands can be used, e.g. for treating anaemia, or bone marrow damage resulting from cancer
                                                                                                                                                                                                                                                                                                                                                                   Anti-foetal liver kinase 2 (fik-2) antibodies - useful in assays, for isolating haematopoietic stem cells expressing receptor and for obtaining ligands
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Murine; flk-2; flk-1; cell isolation; fetal liver kinase; receptor; monoclonal; polyclonal; antibody; tyrosine kinase; ds.

                                                                                                                                                                                                                                                                                                                                                                                                            This sequence encodes a novel human growth factor receptor, kinase insert domain containing receptor or KDR. This receptor is capable of binding to the vascular endothelial cell growth factor, VEGF and is used in a screening assay which identifies compounds that inhibit VEGF action on KDR. Such compounds which inhibit binding of VEGF to the KDR may inhibit anglogenesis and thus be useful for treating caneer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PRI 09-MAY-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        On May 11, 2001 this sequence version replaced gi:13274246.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AL139005 102119 bp DNA linear PRI 09-MAY-2001
Human DNA sequence from clone RP11-95G6 on chromosome 13, complete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostani;
